

## ABSTRACT

In a joining method for a frame of spectacles, and in more particular to a  
method for joining a bridge or a temple to a lens rim, a joining method for a frame  
5 of spectacles comprises deforming a joining portion of a member made of a  
shape memory alloy material so as to be insertable into a pipe for joining the  
member to a lens rim, and joining the joining portion of the member to the pipe by  
returning the joining portion of the member to an original shape before the  
deformation after the member is inserted into the pipe.
